

EPI INFO - A COMPUTER PROGRAM FOR EPIDEMIOLOGY
ROBINSON, R.R.
UNIVERSITY OF MINNESOTA, COLLEGE OF VETERINARY MEDICINE, ST. PAUL, MN
55108, U.S.A.

Epi Info is a series of computer programs used to create and analyze questionnaires and perform other common epidemiologic tasks. Besides a word processor for creating questionnaires, there is a check program, an analytical program for frequencies, cross tabulations, etc. and a statistical program. This software can be used for both epidemic investigations and for disease surveillance producing automated disease reports.

Epi Info requires an IBM compatible microcomputer running the PC-DOS or MS-DOS operating system (version 2.0 or higher), 256,000 bytes of memory, two floppy disk drives or 1 floppy and 1 hard disk drive.
